

Ultrasound in Critical Care: A Comprehensive Guide for Critical Care Physicians

By Dr. Puneet Khanna

Ultrasound is a valuable tool for the diagnosis and management of critically ill patients. It is a non-invasive, portable, and relatively inexpensive imaging modality that can be used to assess a wide range of conditions, including cardiac function, pulmonary function, and abdominal pathology.

In recent years, there has been a growing interest in the use of ultrasound in the critical care setting. This is due to the increasing availability of portable ultrasound machines and the growing body of evidence supporting the use of ultrasound in the diagnosis and management of critically ill patients.
